Start a local k8s cluster with one command

Next, start the platform

So, let's write a *little* script...

Why not start the platform with one command?

```
docker run

# Make k3d cluster available

ghcr.io/cloudogu/gitops-playground:$COMMIT #Params for image go here
```

ghcr.io/cloudogu/gitops-playground

- OCI image
- Contains logic to install and configure the tools
- App written in Groovy (and bash 🥲)
- Additional resources to run e.g. in air-gapped envs
